

Attorney Docket No. ONO-112  
MAIL STOP AF

IN THE UNITED STATES PATENT AND TRADEMARK OFFICE

In re Application of:                                 )     Group Art Unit: 1711  
  )  
HARA *et al.*   )     Examiner: Susan W. Berman  
  )  
Serial No.   10/797,060                                 )  
  )  
Filed:        March 11, 2004                            )  
  
For:                 **PHOTOPOLYMERIZATION INITIATOR**

**Appendix A**

Please amend the specification as indicated according to 37 C.F.R. § 1.121 concerning a manner for making specification amendments.

On page 24, line 23:

-- A preferred blending amount of the photopolymerization initiator of the present invention in the dental composite resin is such that the amount of the component (A) in the photopolymerization initiator is 0.01 to 10 parts by mass and, particularly, 0.03 to 5 parts by mass per 100 parts by mass ~~weight~~ of the radically polymerizable monomer (D). In general, the amount of the photopolymerization initiator (total amount of the components (A) to (C)) is in the range of 0.01 to 20 parts by mass, preferably, 0.05 to 10 parts by mass and, particularly,

preferably, 0.1 to 3 parts by mass per 100 parts by mass of the polymerizable monomer.--
